

TRACTION MOTORWASHING & DRYING PLANT

We offer Traction Motor cleaning systems with aqueous based cleaning Technologies which conserves the detergents before going for Testing & Diagnosis with batch type process such as pre cleaning, final cleaning. Once pre cleaning & final cleaning will be done on single stage water based cleaning in a closed loop chamber & after that the parts are transferred to vacuum drying chamber. The process cycle time per batch will be about 30- 45 Minutes

ULTRAMAX HYDROJET PVT. LTD.

TECHNICAL FEATURES OF MACHINE

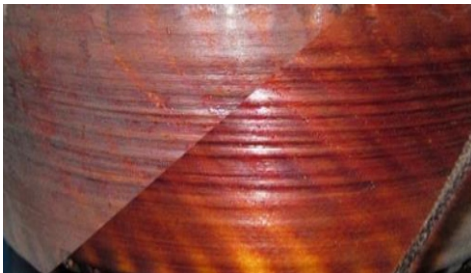

- All process such as pre cleaning, Final cleaning& vacuum drying will be done to get the utmost desired cleaningness level
- Automatic complete cleaning of Motor components such as bearings, housings, pinion, suspension parts, etc
- Consistency in the cleaning process by eliminating unnecessary rewinding & detergent residues left at the windings
- Front Loading Batch Type Machine with Auto Door open & close systems
- Reduced running cost & reduction in water consumption & detergents due to recirculation mechanism
- High Productivity with less manual hours
- Reducing the cost of Locomotive Traction Motor during overhauling operation

Warranty :1 year for OEM components &2 years for workmanship
